

Basics of Good Sleep Hygiene

Good sleep hygiene refers to habits that support consistent, uninterrupted, quality sleep.

Recommended Sleep Hygiene Habits: - Be Consistent: Go to bed at the same time each night and get up at the same time each morning, including on weekends. - Environment: Make sure your bedroom is quiet, dark, relaxing, and at a comfortable temperature. - Electronic Devices: Remove TVs, computers, and smartphones from the bedroom; avoid screen exposure 30-60 minutes before bed. - Avoid Large Meals & Stimulants: Avoid heavy meals, caffeine, and alcohol before bedtime.

Impact of Sleep on Immune & Physical Health

Chronic sleep deficiency increases risks of cardiovascular disease, obesity, and weakened immunity. Sleep Duration Recommendations: - Adults aged 18-64 require 7 to 9 hours of sleep per night for optimal physical and cognitive function.

Managing Daytime Fatigue & Rest Breaks

Strategies for temporary daytime tiredness: - Limit daytime naps to 20-30 minutes early in the afternoon. - Expose yourself to natural sunlight in the morning to align circadian rhythms.

When Inability to Sleep Requires Evaluation

Consult a physician if sleep difficulty persists for more than 4 weeks or if severe daytime sleepiness impacts daily safety.
